Elster Metering Ltd

Due Diligence Development Monitoring

Relocation to Tollgate Business Park, Stafford

Assessing and advising on new premises Project managing design and contracting teams Extensive fit-out and external works

Bringing together its production and administration functions to a new business park location presented significant logistical challenges for Elster – a leading designer and manufacturer of electric and water meters.

Fusion was appointed from the outset of the process, assessing potential relocation sites. Once Tollgate Park was selected, the project was managed and monitored daily, including extensive liaison with the legal, design and contracting teams.

With combined office and production space in excess of 60,000 sq ft and a warehouse fit-out valued at over £300,000 this represented a substantial operation, made more complex by the need to maintain Elster's output and minimise downtime.

Fusion also oversaw the extensive groundworks - including specialist surveys and engineering solutions to address potentially troublesome peat-land issues.

What the client said: *"Fusion provided a genuine conception-to-completion service which was integral to every aspect of our successful relocation."*
